

▶ DATA CENTRE SERVICES

on365 is an independent specialist provider of energy efficient Data Centre and critical physical infrastructure services for public sector, SME and corporate clients across the UK and Europe.

The Challenges

In today's business world, organisations are under intense pressure to deliver on the investment made in IT. The IT department has become a business enabler ensuring businesses can increase profitability by developing new products, services and entering new markets.

However, delivering these additional capabilities requires the deployment of new technology in the Data Centre and Server Room which means increased capital expenditure and operating costs yet at the same time all businesses are targeted with reducing Capex and Opex so the challenge is to do more with less whilst complying with regulatory requirements.

The Solution

With over 25 years of experience **on365** specialise in the design, installation, maintenance and optimisation of critical physical IT infrastructure and utility services. **on365** provide a range of Data Centre Services that enable businesses to meet the IT power and cooling challenge, delivering support at the very foundation of your IT technology.

- Data Centre Design & Build
- Data Centre Maintenance
- Data Centre Management
- Data Centre Infrastructure
- DCIM - Remote Monitoring & Management
- Data Centre Professional Services
- Data Centre Efficiency & Optimisation Assessment Services

A brief overview of each service is provided overleaf or a full datasheet is available for more detailed information.

▶ DATA CENTRE SERVICES

Data Centre Design & Build

on365 have extensive experience of Data Centre design and build to ensure business continuity and maximised uptime. Our specialist installation team work closely with clients from start to finish, ensuring that projects are installed and commissioned safely on time and with minimal disruption.

Data Centre Maintenance

Our comprehensive IT support capabilities encompass installation, system testing, network integration, on-site maintenance and audit/review services. Our service and support team consists of highly experienced engineers and technicians, all trained to IEE standards.

Data Centre Management

Provided on a remote, site-based and call out basis, our services span complete outsourcing to specific managed out-tasking services across the entire IT infrastructure to ensure least disruption to your business.

Data Centre Infrastructure

With over 25 years experience, is recognised as the UK's most successful provider of the implementation and operation of the complete Network Critical Physical Infrastructure (NCPI) for major business.

DCIM - Remote Monitoring & Management

on365 enable organisations to gain insight and drive financial and operational performance throughout the Data Centre including Data Centre assets and physical infrastructure. We utilise powerful management tools and real-time data to understand the true capacity of available infrastructure in order to guide design and change management, recognising the need for holistic management capabilities and visibility of IT and facilities infrastructures.

Data Centre Professional Services

Through proper preparation, focused planning, and intelligent implementation **on365** provide Data Centre Professional Services whether it's assessment, design, migration, or consolidation which will help you maintain an uninterrupted focus on performance and meet the needs of your customers and stakeholders in the face of growing IT management and user demands.

Data Centre Efficiency & Optimisation Assessment Services

Our highly qualified team of Professional Services Consultants provide a comprehensive audit service which combines a critical assessment of your current facility and requirements with independent advice and recommendations where change offers the greatest returns.

The Benefits

on365 is totally focused on enabling organisations to get the very best out of their IT environment. With our own distinct knowledge base and expertise we offer a project-based approach that can identify the priorities, recommend ways to leverage existing assets to improve performance, reduce cost and lower carbon emissions. **on365** will identify any inefficiencies in your Data Centre, server room or physical infrastructure and by driving through optimisation and efficiencies within your infrastructure we will reduce your Capex and Opex. Not only that but **on365** can also provide overall management and control of your infrastructure environment.

Why on365

on365 is the UK's leading provider of critical power and cooling services for major business IT and communication systems. With an extensive portfolio of products and services **on365** have over 25 years experience of delivering the highest level of Data Centre solutions from complete Data Centre build to rack accommodation including power, cooling, accommodation, security, management and protection. Offering full quality assurance and comprehensive accreditation and certification including fully qualified and vetted staff **on365** has established a strong reputation for innovative Data Centre design, installation, maintenance and optimisation.

*"I am writing with regard to the new installation in London. My colleagues and I were very impressed with **on365's** professionalism, planning and installation."*

Michael Bruce
Director of IT, Moore Stephens
